

How to make a github pages portfolio

- 1) Login at github.com and create a new project.

Note: You may need to sign up first.

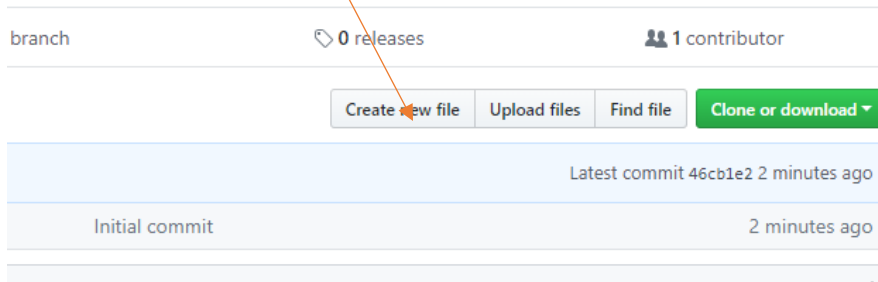

- 2) On the Create a new repository page name your repository with <your username>.github.io, check the "Initialize this repository with a readme" check box and click "Create Repository."

Note: Github uses project and repository interchangeably.

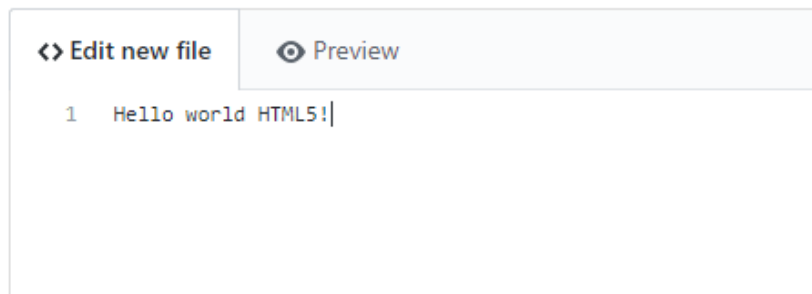

A screenshot of the 'Create a new repository' form on GitHub. The 'Owner' dropdown is set to 'rhildred'. The 'Repository name' field contains 'rhildred.github.io' and has a red warning icon. A red tooltip message says 'The repository rhildred.github.io already exists on this account'. The 'Description (optional)' field is empty. The 'Public' radio button is selected. The 'Initialize this repository with a README' checkbox is checked. Below this are two dropdown menus: 'Add .gitignore: None' and 'Add a license: None'. At the bottom is a green 'Create repository' button. Two orange arrows point from the 'Start a project' button in the first screenshot to the 'Create repository' button and the 'Initialize this repository with a README' checkbox in this screenshot.

3) Click to "Create new File"

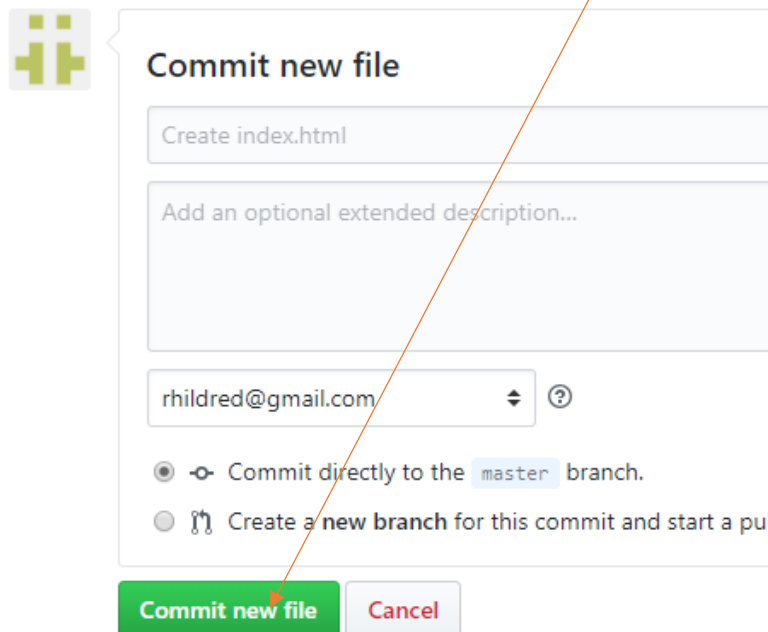

4) Name your file index.html and put some content inside.

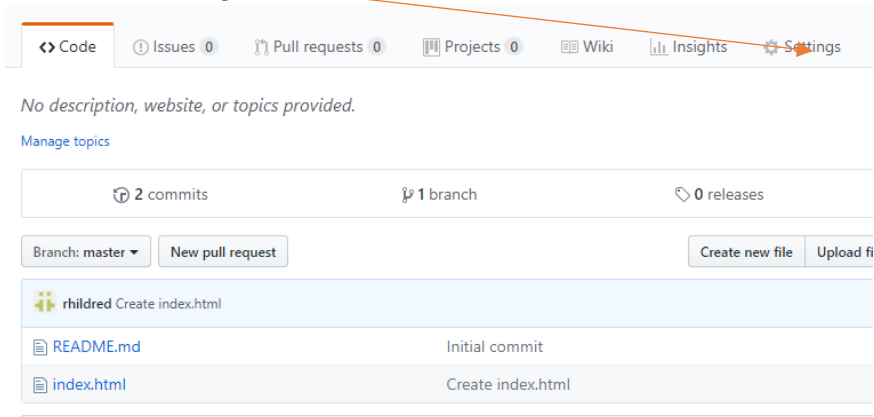

rhildred .github.io / or cancel

5) Scroll to the bottom of the content and click "Commit new File."

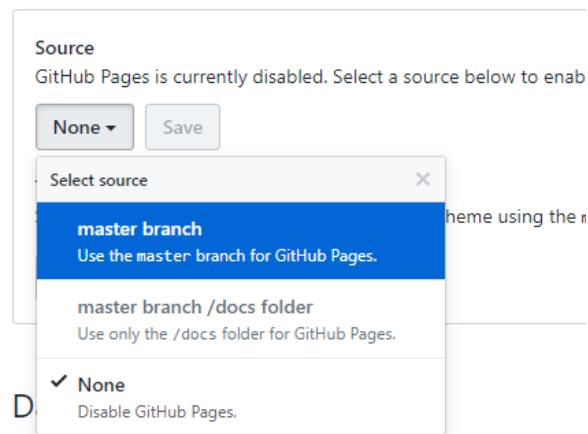

6) Click on the settings tab.

7) In the github pages section click on the master branch if it isn't selected already.
